XMC Graphics & GPGPU Card Supporting NVIDIA Ampere A500

The Condor NVA500xX is a high-performance XMC video graphics and GPGPU processing card based on the NVIDIA® Ampere™ architecture using the RTX A500 GPU. The Condor NVA500xX XMC card supports 4 GB GDDR6 graphics memory along with 2,048 NVIDIA CUDA Cores, 64 Tensor Cores, and 16 RT Cores for uncompromised computing accuracy and reliability.

The NVIDIA RTX A500 GPU is a headless GPU that operates without a display output. Headless GPUs can be leveraged to perform parallel processing on large datasets, making them suitable for tasks like object detection, image recognition, and other computationally intensive operations. Headless GPUs can contribute to reducing latency by offloading specific computational tasks from the CPU to the GPU, enabling faster processing of data.

The Condor NVA500xX offers high-performance embedded computing (HPEC) capabilities such as low-latency GPGPU processing, real-time ray tracing, deep learning (DL), and AI inferencing. This versatile solution features support for PCI Express Gen 4 for increased data transfer speeds, incorporates dedicated H.265/H.264 encode and decode engines, and supports NVIDIA GPUDirect Remote Direct Memory Access (RDMA) for streamlined data transfer operations.
