Tech Source offers a graphics solution for the Sun Fire T2000 Server

Orlando, FL (April 10, 2006) Tech Source Inc. today announced a new graphics product for the Sun Microsystems UltraSparc platforms. The GFX 550e is a PCI Express based graphics card that offers a solution for servers such as the Sun Fire T2000 and workstations such as the Sun Ultra 45. In fact, the GFX 550e is the only graphics solution presently available for these machines.

This Solaris Ready™ product follows in the footsteps of several other successful graphics products that Tech Source has offered to the Sun market for over the past 15 years. Tech Source has been very successful in this market and has often augmented solutions provided directly by Sun, especially in multi-display environments.

Selwyn Henriques, President of Tech Source said: *"PCI Express was a natural transition for our graphics products. We are delighted to offer this solution into the Sun market. We are looking forward to having great success with this product by providing a much needed display solution for Sun's latest servers."*

ABOUT TECH SOURCE

Privately owned, Tech Source, Inc. is a leading manufacturer of high-resolution graphics accelerators for OEMs of PCI computer systems. Tech Source is widely known for its Raptor PCI family of graphics accelerators. For more than 18 years, Tech Source has provided advanced solutions for OEMs, integrators, government contracts, VARs and large corporate users. Tech Source is a leading supplier of graphics accelerators for applications requiring ultra-high resolution, such as air-traffic control, medical, seismic and satellite imaging.
